DETAILED ACTION

Withdrawal of Allowability

The indicated allowability of claims 25 and 26 is withdrawn in view of the newly discovered reference(s). Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 25 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sakamoto et al. (US Patent Number 6,557,110 B2) in view of Hassoun et al. (US Publication Number 2001/0033630 A1).

Sakamoto et al. disclose all the claimed subject matter "plurality of skew indicator signal inputs...delay control signals" in claim 25 as follows. The use of control logic for comparison of signals in order to reach a judgment or decision is well known in the art. Sakamoto et al. teach a delay controller unit in Figure 18, element 52. Further, Sakamoto et al. teach the input to the delay controller unit is a time matching signal used as an indication of the skew of the channel frame. However, Sakamoto et al.'s skew jitter compensation means does not include a digital filter connected to each of the plurality of skew indicator signal inputs.

Page 3

Hassoun et al. teach the use of digital filtering of phase measurements to reduce errors brought on by jittering (paragraph 0037).

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Sakamoto et al.'s delay controller with Hassoun et al.'s teaching of using a digital filter the skew indication signal, since Hassoun et al. suggest that the result of this filtering would help to reduce loss of synchronization brought on by jitter.

Regarding claim 26, Sakamoto et al. further teach the claimed subject matter in Figure 16.

Allowable Subject Matter

Claims 1-24 and 27-44 are allowed for reasons set forth in Final Rejection, Paper No. 13.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Guillermo Munoz whose telephone number is 703-305-4224. The examiner can normally be reached on Monday-Friday 8:30a.m-4:30p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen Chin can be reached on 703-305-4714. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-306-0377.
